

TIMAVO

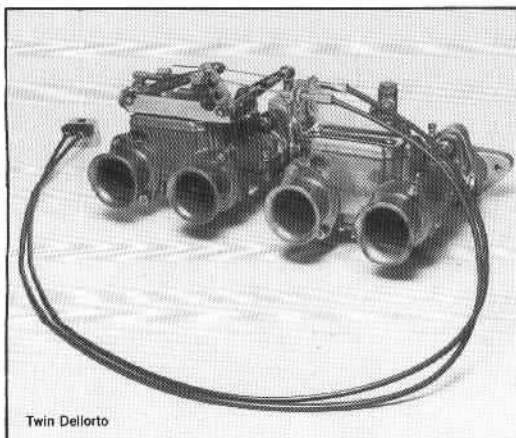

Twin Cable Throttle-Linkage Kits.

For twin Weber DCOE's, twin Dellorto DHLA's AND single Weber DCOE's.

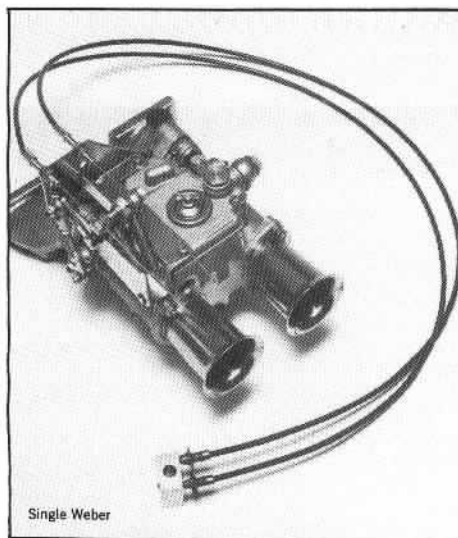

Twin Weber

Twin Dellorto

These fail-safe throttle linkage kits are fabricated from stainless steel to Timavo's traditional high engineering standards and are designed for use on road and competition cars which are fitted with Weber DCOE or Dellorto DHLA carburetors, including SINGLE Weber DCOE's.

Single Weber

Adjustable Pedal Control

A clever design incorporated into the throttle quadrant allows for a choice of ratio of pedal movement in relation to carburettor throttle opening to suit the driver's preference.

Twin Anti-friction Cables

A special cable lining ensures perfect smoothness of movement of the inner cable throughout its travel.

Anti-friction Rod Ends

The smoothness through the cable is maintained throughout the entire linkage by anti-friction rod ends which are fitted to the Timavo operating rod.

Twin Throttle Return Springs

Clearly no fail-safe throttle linkage system would be complete without the dependability of twin throttle return springs which are fitted on all our kits.

Threaded Cable Adjusters

These provide the finishing touch by allowing fine adjustment of the cable tension to be made in moments.

Illustrated fitting instructions are enclosed in every kit.
